

DDDK app for blood donations management insturction manual

Hello and welcome to the instruction manual for the **DDDK demo application**! This app is not hosted anywhere, but there are others that are, and you can check them out in my portfolio site at <https://aleksandar-matic.web.app/skillsandprojects>. Once you open it, scroll a little bit down and check those with web page links.

1. Backend

Backend is actually an **asp.net web api** made in C#. Database is already included as a project file. Open *DDDKHostApi* solution file and press *F5*, or go to *Debug* menu bar option and select *Start Debugging*. And that's it! Web browser window with every endpoint configuration displayed will show up, command prompt with serilog displaying what's going on in the background will also show up, and you're good to go!

2. Frontend

Open *DDDK_Wpf solution file* and, again, press *F5* to start the app. It will display the following window:

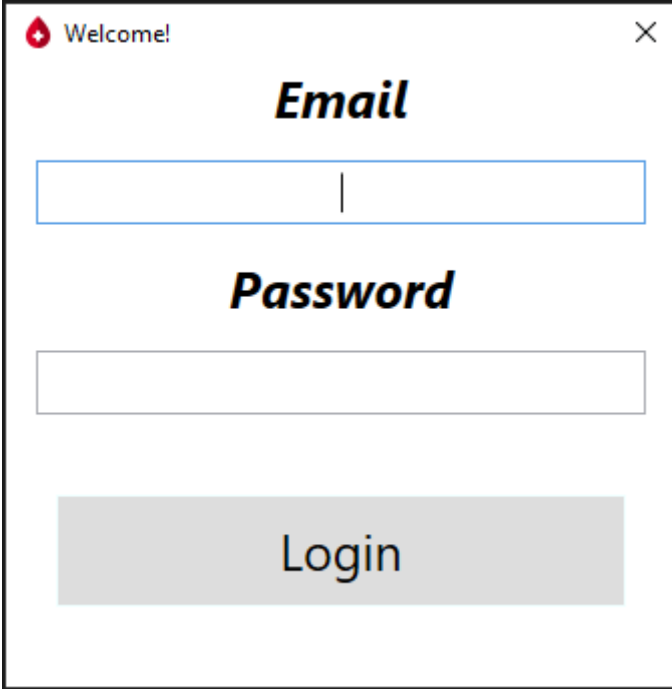

A screenshot of a Windows application window titled "Welcome!". The window has a standard Windows title bar with a red icon on the left and a close button (X) on the right. The main content area is white and contains the following elements: the word "Email" in a large, bold, italicized black font; a text input field with a blue border and a vertical cursor; the word "Password" in a large, bold, italicized black font; another text input field with a gray border; and a large, light gray rectangular button with the word "Login" in black text centered on it.

Image 1: Login window

Type in *Email* and *Password*. For this purpose, considering database is already generated and loaded, type in the following data:

Username: admin@dddk.org

Password: Admin@417302

If you're of the administrator role, and if you used previous credentials to log in you most certainly are, you'll get the following menu:

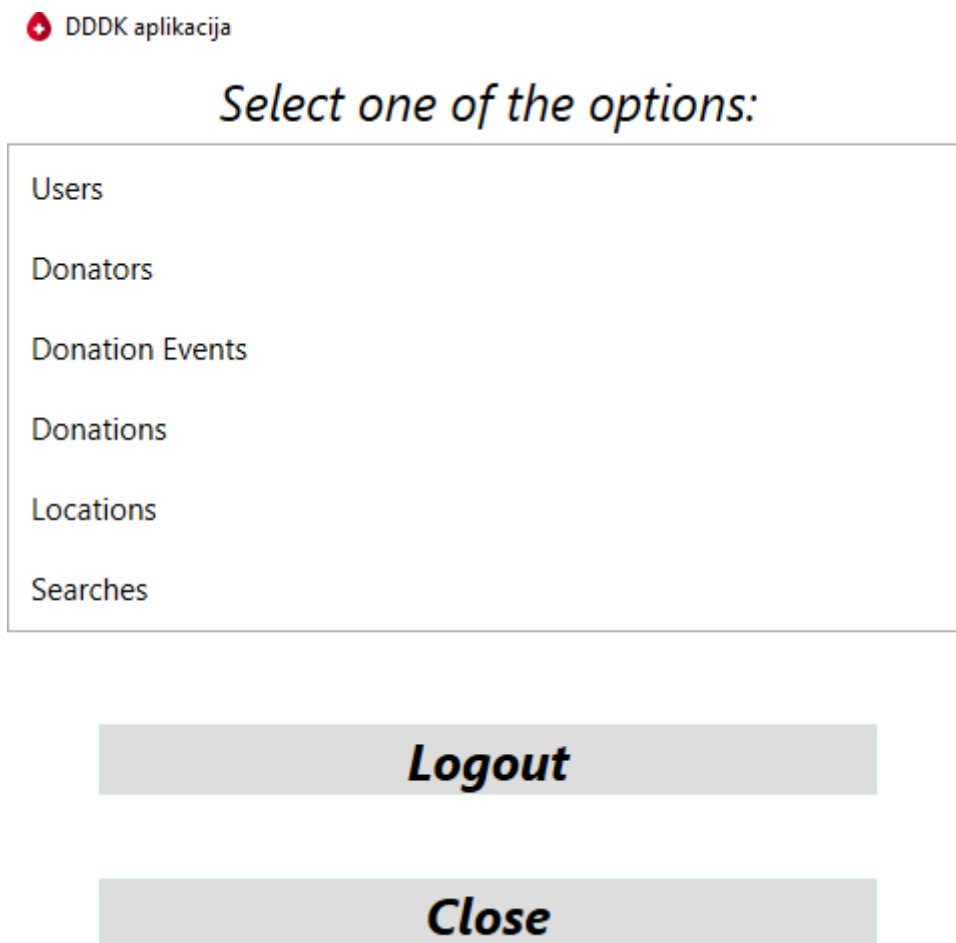

Image 2: Main menu

The difference between moderators and administrators is option number one: *Users*. If you log in as a moderator, you won't see it at all and won't be able to manipulate with users allowed to use the app. That's it. Everything else is the same for both roles. If you click on the *Users* option, you'll get the following appearance:

Once you click on any of the names rounded with red square, interface on the right side will fill in with data and you'll be able to delete the user or change his username or password, or change the role. If you press *New* button, the interface will be enabled and you'll be able to input any data of a new user you're registering. Everything is pretty self explanatory once you start using it.

If you select *Donators*, *Donations* or *Locations*, the interface will pretty much be the same, and you'll be able to do the very same CRUD operation like in the previous example. Here's an example of loaded interface for *Donators* option:

Bear in mind Date type is used in serbian/bosnian/croatian etc. format: dd.MM.yyyy. Of course, in database, it is saved in standard SQL format: MM/dd/yyyy.

If you click on *Donation Events* option on the left, things are a little bit different and the menu looks like this:

As you can see, it's similar to the previous ones, but you can see every person donating blood on that particular event. In case you want to edit donators, just click on *Edit* button and select everyone who donated blood on that specific donation event. Same goes when you're adding a new donating event. In case you delete certain donation event, every donation connected to that event will also be deleted.

If you click on *Searches* on the left, you'll be able to search all the data based on certain criterias.

By donating availability will allow you to search for any donator who is of certain blood type, or is able to donate (meaning it passed more than 4 months since previous donating), or both.

If you select *By donator* option, input some search data (in following example it's "Aleks" as a part of the first name), and then select any name from the list displayed below input fields, you'll get their personal data, as well as every donation made by that donator.

And that's it! Small, simple, yet very useful application. It's not perfectly pretty, but it's more than functional. In case you want to see my other apps as well, head down to my portfolio web site mentioned at the start of this manual, and go to the Skills and projects page.
